

ARMORLOGIC - Profense™ web application firewall update improves protection and enhances load balancing functionality

VICTORIA, BC, Canada/COPENHAGEN, Denmark – March 31, 2009 – Armorlogic, makers of Profense™, the web application firewall, today announced the release of a new Profense version. While already providing full PCI DSS (http://www.armorlogic.com/profense_pci_dss_compliance.html) section 6.6 compliance, this new version includes enhanced denial of service mitigation, improved load balancing and expanded management, logging and reporting features. These upgrades cement Profense's reputation as the easiest to use web application firewall (http://www.armorlogic.com/profense_overview.html) on the market, as evidenced by the maximum 5 star ratings received by Profense for Ease of Use, Performance, and Support in the January 2009 review by Secure Computing Magazine.

"Web security can be complex" said Jakob Gercke, Vice President of Armorlogic. "But, that doesn't mean using your web application firewall should be. To help companies secure their web sites and applications against a growing number of threats, we've focused on making our web application firewall solution affordable and easy to use. We are very pleased that our development team has accomplished this goal and was recognized by SC Magazine."

"Ease of use is very important to our customers as it allows them to protect their websites, web applications, data and visitors, and meet full PCI DSS 1.1 and 1.2 section 6.6 compliance requirements, without having to add staff or distract the IT team" added Srebrenko Sehic, Vice President of Software Development.

The full featured, complete and powerful standalone Profense Web Application Firewall is priced at \$5950, and one license permits installation on each of your development, staging and production servers. For a full list of features and capabilities, please visit http://www.armorlogic.com/profense_features.html.

About Armorlogic

Armorlogic (<http://www.armorlogic.com>) is the developer of Profense™ web application firewall software solutions that provide cost effective and easily implemented proactive protection of web sites and web applications. Profense provides complete OWASP Top Ten (http://www.armorlogic.com/profense_owasp_top_10_defenses.html) vulnerability protection and fully complies with and satisfies the Payment Card Industry Data Security Standard (PCI DSS) requirements. Armorlogic's Profense line of web application firewalls also include auto learning, advanced load balancing, acceleration, high availability (including active/active), session persistence and compression. For further information or to download a free trial of Profense web application firewall software, please visit www.armorlogic.com.
